

NITRO MCP

# What you can do once Nitro MCP is connected

Nitro MCP connects Claude to Nitro's document engine, so you can run end-to-end document workflows from inside the Claude app you already use. Describe the outcome in plain language—Nitro MCP does the rest.

## Extract data

Pull names, dates, tables, or form fields from PDFs and straight into spreadsheets or databases. Search inside documents, and scan for PII before anything goes out.

### Sample Prompts:

- "Pull the vendor, amount, and due date from every invoice in this folder into a spreadsheet."
- "Find every contract in this folder that mentions an auto-renewal clause."

## Convert and compress

Move between formats and shrink files down for email or archive—without leaving the conversation.

### Sample Prompts:

- "Turn this 80-page Word draft into a PDF and compress it small enough to email."
- "Convert these scanned receipts into a single PDF and shrink it for the expense report."

## Reshape and transform

Collapse file prep into a single prompt—merge, split, rotate, delete pages, and update document properties across many files at once.

### Sample Prompts:

- "Merge these signed contracts in date order and remove the blank pages from each."
- "Split this 200-page deposition into one PDF per witness and rotate any sideways pages upright."

## Convert and compress

Lock down documents before they leave your business—redact sensitive content, flatten finalized files, and apply or remove password protection.

### Sample Prompts:

- "Redact the PII from these draft contracts and flatten the output so nothing can be restored."
- "Password-protect these HR files before I email them to the benefits vendor."

## A few common workflows Nitro MCP unlocks end-to-end

- **Onboarding pack cleanup.** "Merge these PDFs, delete blank pages, and password-protect the result."
- **PDF to Excel.** "Pull the tables out of this report and put them in a spreadsheet."
- **Privacy pass.** "Scan this for PII, then redact anything flagged before I send it."
- **Email-ready conversion.** "Turn this Word doc into a PDF and compress it small enough to email."
- **Form processing.** "Extract the filled-in form fields from these applications so I can hand them off."
